

## Step 4: Building the Cloud

Spray adhesive on a 0.5m<sup>2</sup> area of the ceiling. Firmly press the hollow fibre onto the adhesive to form a cloud shape with a depth of around 10cm. Add more adhesive and hollow fibre if gaps appear.

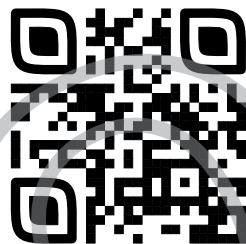

Continue to apply the hollow fibre until the entire installation area is covered.

☁ Mold the clouds into any shape you like! ☁

**You are all set to experience your  
Thundercloud Smart LED Cloud Light!**

Installation Manual

**VulcansDesign**

# Thank you for purchasing the 3D Thundercloud Smart LED Cloud Light

**Read carefully through these instructions before you start.**

For safety, please wear the protective gloves and safety goggles that are provided during the installation progress.

Please keep the Adhesive Spray out of reach from children.

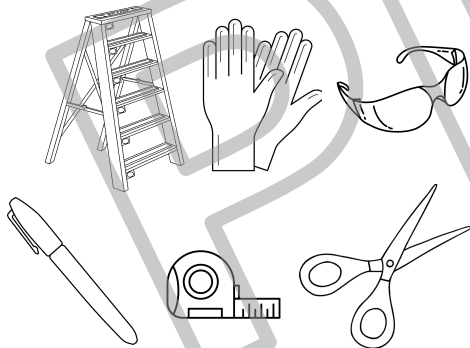

## Tools and Materials;

Included in this package:

1. Thunder Smart LED 3D Cloud Lights
2. Plastic Polythene Barrier (Optional)
3. Round Transparent Double-Sided Dots (Optional)
4. Hollow Fibre Filling
5. Adhesive Sprays
6. Gloves
7. Dual USB Plug
8. Safety Goggles

Tools you need;

1. Stepladder
2. Marker Pen
3. Tape Measure
4. Scissors

## Step 1: Preparation

Thoroughly clean and dust the ceiling where the cloud light will be installed, ensuring the surface is smooth and dry.

If you are using the protective barrier - Cut the Plastic Polythene Dust Sheet to cover the ceiling installation area, extending it down one wall toward a power source (x2 USB or a 230v wall socket).

## Step 2: Attaching the Polythene Sheet (Optional)

Secure the polythene sheet using the Double-Sided Adhesive Dots. Position the dots along the edges, corners, and center of the ceiling, spaced approximately half a meter apart, including the section extending down the wall. Press the sheet firmly onto the ceiling where the adhesive dots are placed. This will protect the ceiling and allow for easy removal when necessary.

## Step 3: Installing the LED Strips

Starting near the power source on the wall, mark two zigzagging lines, each around 10 meters in length, running up the wall and across the ceiling using a marker pen. Carefully peel off the backing from the LED strips and press them firmly along the marked lines. Be sure to follow the markings closely, and avoid touching the adhesive to preserve its stickiness.
